

Letter of Recommendation

Tomáš Jakab

To Whom It May Concern,

I am pleased to recommend Tomáš Jakab for the UPE Scholarship Awards. Tomáš is an excellent undergraduate student and member of Czech Alpha UPE Chapter. He has top academic records with overall GPA 1.02 on scale 1.0-4.0 where 1.0 is the best grade. From the beginning of his studies, he was participating in various academic activities at our university at the Department of Cybernetics.

Just after the first year of his undergraduate studies, he joined a research group of professor Jiri Matas, a highly respected researcher in Computer Vision and Machine Learning areas. The cooperation with professor Matas resulted in an internship at the University of Oxford in the renowned VGG laboratory, where he worked with professor Andrea Vedaldi on advanced machine learning problems in computer vision. The successful internship resulted with an offer to write his Bachelor's thesis with professor Vedaldi. The thesis received very positive reviews with strong recommendations for the best grade.

Apart from research, he took a part in teaching. During his second year, he served as a student teaching assistant in a course about Programming and general problem solving. He advised and helped students with lower programming skills to catch up with their more experienced peers.

For all these reasons and outstanding service to the community, I do not hesitate to recommend him for the prestigious UPE Scholarship Awards.

Yours sincerely,

Tomáš Černý, Ph.D.
