Head of the Intelligent Data Analysis group at the department. Former head of the dept., prof @ SUNY Binghamton, postdoc @ UW Madison. Currently teaching Machine Learning, Bioinformatics, and Logic Programming. Siemens Best Innovation Award Laureate.
Personal web page here, full vita here.

We currently have a good environment at the faculty promoting excellent research and teaching. This has improved a lot from what we had 5-10 years ago and the trend should be sustained. I want to contribute to this end. I also think the time is up now for the faculty management to do more than cultivate rules and processes; the dean's gang should engage in the dirty work of getting low-performing departments restructured, attract good professors from around the world, enforce quality more actively, etc. In the senate, I want to support them in these unrewarding deeds.

I approve my candidacy for the faculty senate. S kandidaturou do AS FEL souhlasím.
